

iPhone and iPad Group Monthly Report - November 2024

Under the heading of security, we looked at the significant risks associated with using QR Codes (those squares of dots that are popping up all over the place these days). We went on to talk about Apple's privacy feature called Hide My Email which is available with iCloud+ and allows users to create unique, random email addresses to protect their personal email address. These addresses forward messages to the user's real email, keeping it private and reducing the risk of spam or unwanted tracking.

After the break we looked at the Files app available on iPhone and iPad. This app is designed to help with the organising, accessing, and managing documents, photos, and other files and does this in one central location. It integrates content held locally with that held in iCloud Drive, and also third-party cloud services like Google Drive, Dropbox, and OneDrive.

There will be no meeting in December as it would be too close to Christmas. The next meeting will be on Tuesday 28th January 2025.
